Professional Summary

Information Technology undergraduate and .NET-trained developer with hands-on experience as a Product Development Intern at Kanini Software Solutions, building full-stack applications on the **ASP.NET Core Web API, C#, and SQL Server** stack. Strong foundation in Object-Oriented Programming, SOLID Principles, layered architecture and RESTful API design, paired with React front-end development. Comfortable across the full .NET development lifecycle — from designing secure CRUD APIs to testing with Postman and debugging production issues. Quick to pick up new tooling and passionate about building scalable, maintainable software.

Technical Skills

.NET / Backend: C, ASP.NET Core Web API, .NET, RESTful API Design, Layered Architecture, CRUD Operations

Front-End: React, JavaScript, HTML, CSS, Bootstrap, Tailwind CSS

Databases: SQL Server, MySQL

Core Concepts: Object-Oriented Programming, SOLID Principles, DBMS, Data Structures Algorithms

AI APIs: Gemini API, REST APIs, FastAPI

Tools: Git, GitHub, Visual Studio, VS Code, Postman

Experience

Product Development Intern — .NET Full-Stack June 2026 – Present *Kanini Software Solutions*

Developing full-stack web applications using ASP.NET Core Web API, C, React and SQL Server.

Designing RESTful APIs and implementing secure CRUD operations following layered architecture.

Applying Object-Oriented Programming and SOLID Principles to build maintainable .NET backend services.

Testing ASP.NET Core Web APIs using Postman while debugging and resolving application issues.

Collaborating in Agile development through code reviews and .NET feature implementation.

Projects

Finance Insurance Management System — ASP.NET Core Web API, React, SQL Server

Developed a scalable Finance Insurance Management System using ASP.NET Core Web API, implementing customer and policy management modules.

Designed REST APIs, secure CRUD operations and layered architecture in C following SOLID Principles.

Improved maintainability of the .NET backend through modular, testable services.

AI Interview Preparation Platform (Major Project) — React, ASP.NET Core Web API, C, SQL Server, FastAPI, Gemini API

Developing an AI-powered interview preparation platform with an ASP.NET Core Web API backend, simulating recruitment processes for product-based and service-based companies.

Implemented ATS resume analysis with AI-driven recommendations and interview readiness assessment.

Built AI-generated aptitude, DSA, technical and HR interview workflows with performance analytics.

Developed scalable REST APIs using ASP.NET Core Web API, C, SQL Server, layered architecture and SOLID Principles.

TravelBuddy – AI Travel Planner — React, Flask, Python, Gemini API

Developed an AI-powered travel planning platform generating personalized itineraries.

Integrated Gemini API for itinerary generation, budget estimation and activity recommendations.

Built a responsive React interface delivering an improved user experience.

Education

Bachelor of Engineering (Information Technology)

Trinity Academy of Engineering, Pune

CGPA: 9.71/10

2023–2027

Certification

Python Programming Certificate – Code with Harry
